**NEEDS AND AREAS OF INTERACTION OF POWER WITH THE FORCE
OF THE NEW LEGAL ORDER OF SILK ROAD**

*National Guard National Academy of Ukraine,
m. Kharkiv, pl. Povstanya 3.*

***Annotation:** The necessity and directions of interaction of forces with the law enforcement powers of the New Silk Road enforcement to ensure the effective implementation of the objectives of protecting public order and public safety in dealing States indicated problems in trade and economic, cultural and scientific areas, ensuring an appropriate investment. Posted demands to the authorities and law enforcement forces of the New Silk Road countries on cooperation in order to ensure public order and public safety in solving problems in trade and economic, cultural and scientific areas, ensuring an appropriate investment.*

***Key words:** cooperation, investment, the state of the New Silk Road, authorities, forces law enforcement authorities.*

Introduction. Recent events in Eastern Europe led some of the world see the so-called "Silk Road" as a way of trade and economic, cultural and scientific relations. These "new states" are states of Europe and Asia, which require for their own development and relations between these countries of certain investments.

Considering the threat of terrorism and possible aggression on the part of some countries, peace in the area of the New Silk Road countries can provide, within its

competence, the forces of law enforcement that will interact with the circumstances that consist, on its own authority. According to the author, but only if, the New Silk Road countries can count on the necessary investments and further development of trade-economic, cultural and scientific relations between states.

Literature review. Issues of interaction investigated following scientists: Y.Kozlov - coordination in the management of the economy [1]; A. Lunev – coordination in government [2]; B. Mykryukov – theory of interaction forces [3]; I. Kirichenko – the interaction of disparate forces of the military organization of the state [4]; M. Orlov and M. Oleszczuk – interaction of ground and air components in the air defense system [5].

As for the extended help on Silk Road, it is the matter dealt E. Smith [6] and issues of route schemes and concepts of the new Silk Road – I. Saburova [7].

However, do not get into one of the most important problems of public administration is the organization and implementation of cooperation of authorities with powers of law enforcement powers of the New Silk Road to ensure the effective implementation of tasks of public order and public safety in the complication of the situation in these countries.

Main part. Background improvement of cooperation of authorities and forces law enforcement powers of the New Silk Road due to the following circumstances:

- many states, including Ukraine, seeking to become a full-fledged European country with open borders and a develop democracy;
- to present the state of the New Silk Road signs are difficult socio-political and socio-economic environment;
- the presence of imperfect legislation on the interaction of these bodies in some states, including in Ukraine;
- to start administrative reform in Ukraine, which applies not only to government but also of the forces of law and order.

The author believes that all of this together, and a little alone and may be a cause of some dissatisfaction among states in the New Silk Road resolved challenges of

attracting foreign investment and further development of trade-economic, cultural and scientific relations between states. The solution to the current conditions requires.

1. From the *authorities*:

– continuous monitoring of the socio-political situation in the regions where the route runs New Silk Road;

– concentration of emphasis on the awareness of the citizens of the state;

– more attention to their appeals and complaints;

– pay special attention to the work of transport, medical care, work critical infrastructure;

– prepare all the infrastructure of cities, towns and villages to the possible negative consequences as a result of the unrest;

– preparation of vehicles of various types of assistance to the forces of law and order and so on.

2. From the *forces of law and order*:

– constant monitoring of the situation in the zones of responsibility;

– strengthen regime of service of public order and public security;

– training capabilities and to provide all kinds of long confrontation with organized criminals and mass sabotage and reconnaissance forces of warring neighbors;

– timely adoption situational decision to focus the necessary capabilities in the right place and the necessary time in case of complications environment;

– ensure reliable protection of mobile objects that move the route of the New Silk Road.

Under these conditions it is extremely important decision at national level (at the level of central executive) tasks for the *organization of interaction* of the above. The solution to this problem can be realized by the scheme shown in fig. 1.

For the organization of interaction necessary to prove the concept of specific organizational activities of these bodies as a way to a specific purpose on the basis of coordination and interaction at the organizational stage to carry out the following areas:

- regulatory support interaction (the prerogative of the senior management body);
- implementation of regulatory support - as an example, the establishment of coordination centers (prerogative of interaction);
- direct planning of interaction (the prerogative of interaction).

It should be note in hiring for Ukraine that today cooperation between local authorities and local authorities organized, but between the authorities and law enforcement forces organized enough.

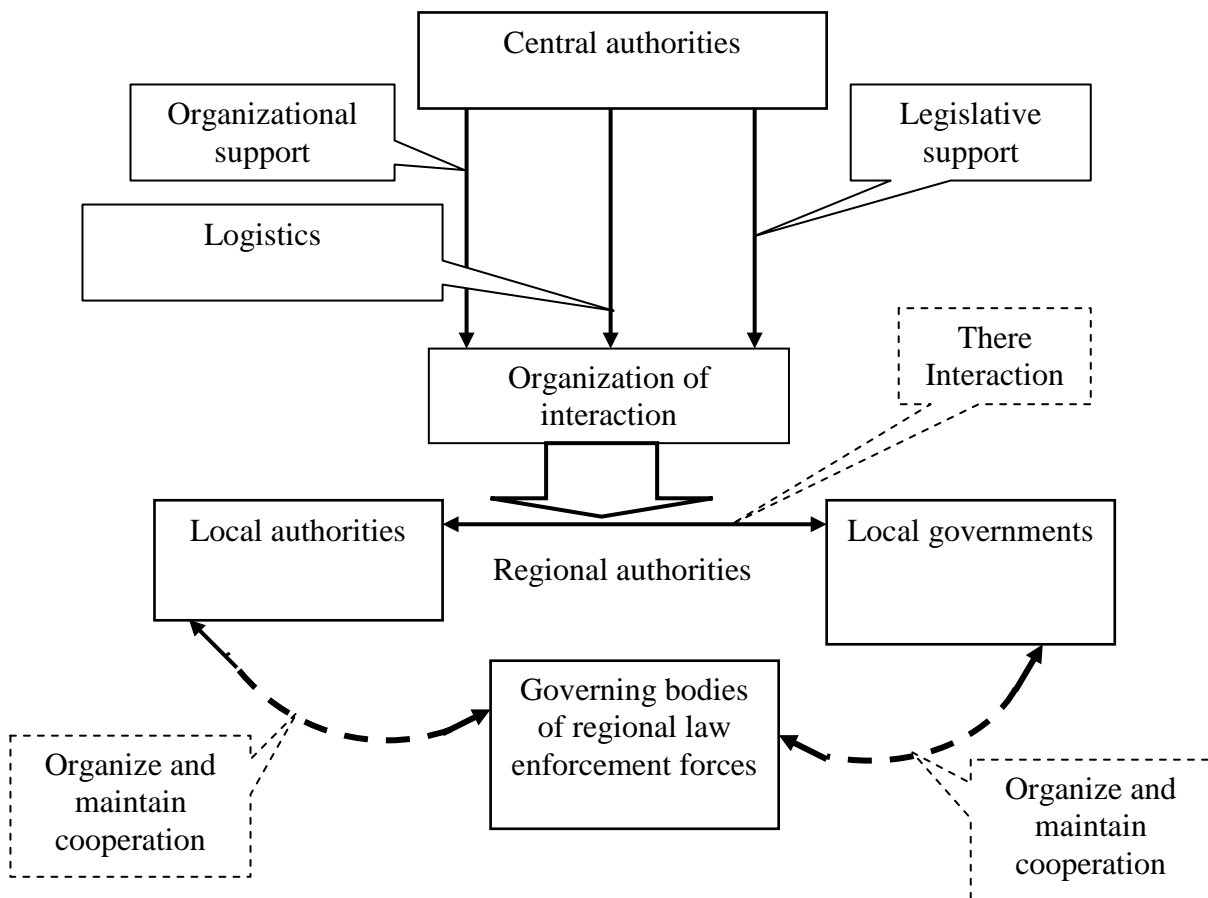

Fig. 1. Organization of interaction between regional authorities and regional forces of law and order

According to the author directions of cooperation of regional authorities and forces of law and order should be consider:

- mutual notification in case of complication of the situation on the route New Silk Road;

- the place and time of concentration mutual efforts capability specified subordinate bodies;
- mutual coordination of efforts at the time of application;
- create a single information space for sharing information warning about the changing circumstances on the route New Silk Road, reciprocal action in case of complications;
- interaction intellectual capacity to enforce the objectives of protecting public order and public security.

Lead the implementation of these areas should governments with the active involvement of law enforcement forces.

Conclusion and conclusions. Outlines the scientific problem of imperfection on the interaction of government and the regional powers of law enforcement to ensure the effective implementation of the objectives of protecting public order and public safety in the complication of the situation on the route New Silk Road can be continued the following areas:

- development of structural and functional method of forming the system of interaction of executive authorities in the field of law enforcement:
- development of structural information the method of formation of a single body of regional law enforcement forces of the principles and norms of information processing as interaction of the subject;
- development of methods of cooperation of authorities and forces of law and order and method of direct interaction of these bodies;
- developing methods and interaction of a single governing body of the law enforcement forces.
